

Tutorial Paraview 03 - Fluid dynamics and VTK integration

1) clone the git repository below to your local computer

```
>>>>. git clone https://github.com/luisps/MCA_fluid.git
```

2) Read the files README.md and QUICKSTART.md for building instructions and an overview of the software capabilities

3) The main goal of this tutorial is for you to understand how to save simulation data into files, that can be read by Paraview in a post-processing visualization.

Read VTK_INTEGRATION.md and scroll through VTKWriter.cpp to get a feeling of VTK's data structures and file i/o API.

4) Build and execute the code

5) Go through the steps in PARAVIEW_TUTORIAL.md
